Navigating Uncertainty & Prioritizing What Matters

Study Overview

Key Objectives

- How have financial decision-makers responded to economic changes and the COVID-19 pandemic?
- What outlooks do financial decision-makers have toward the post-COVID recovery?
- What have companies done to invest in and attract talent during The Great Resignation? What tools are companies using?
- What is the outlook of the future financial landscape among decision-makers, and what steps are they taking? What tools do decision-makers plan to adopt, if any?

Survey Sample & Administration

- quality control

• The survey was administered online in Q4 2022 and respondents were recruited via a third-party panel and a contact list.

• The analysis includes a total of 657 respondents following data cleaning and

Respondent Qualifications

- Age 18+ and employed full-time
- Currently employed in the US, Canada, or Mexico (Panel respondents only; list respondents employed in any country)
- Currently holds a management position (C-level executive (CFO), VP, Director, Controller) in finance.
- A primary or shared decision-maker in their company's finance OR influential in decision making.

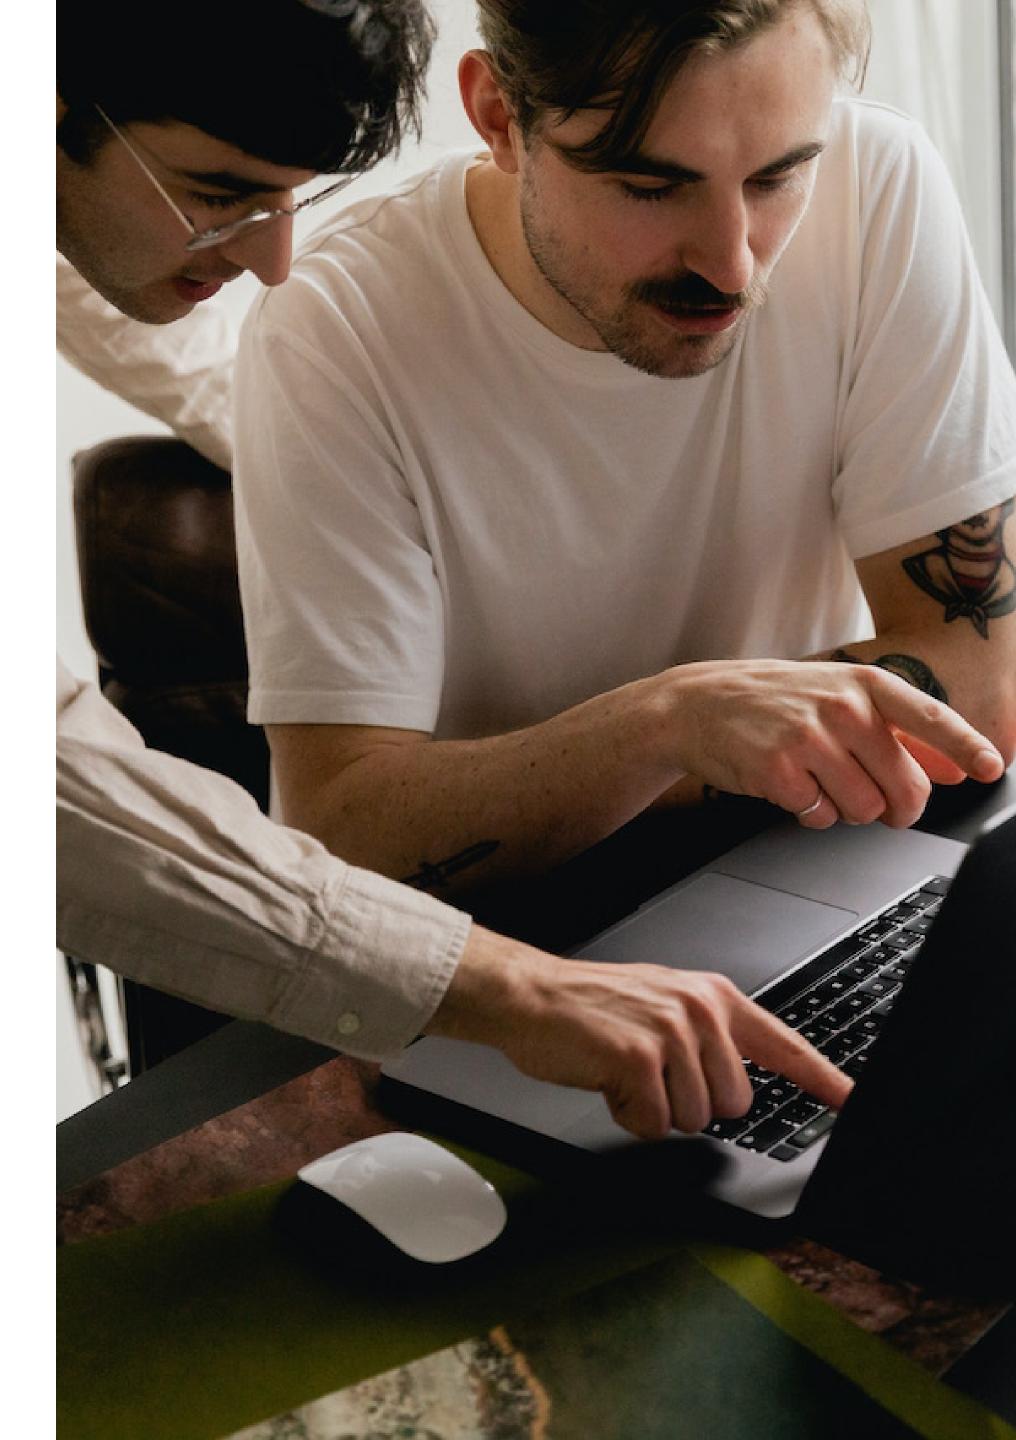

Recommendations

With increased economic uncertainty in recent months (e.g., inflation, tax reform, supply chain shortages, the lingering effects of the COVID-19 pandemic and a potential recession), businesses continue to reallocate spending within their businesses.

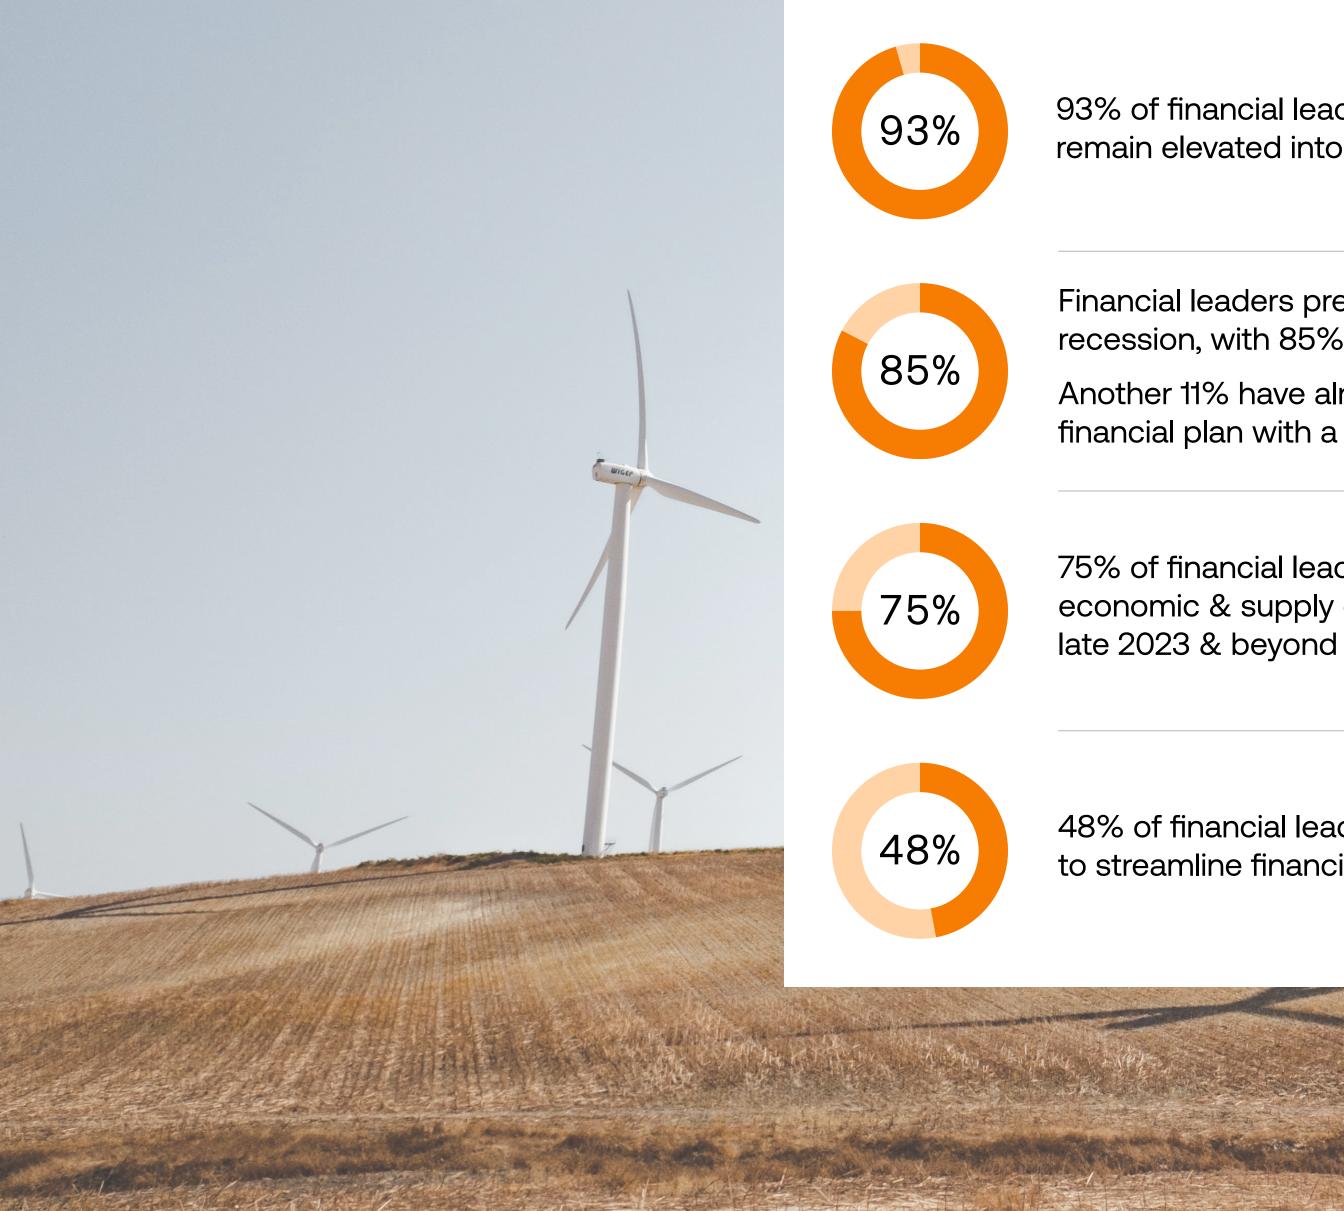

Benefits of Machine Learning

Machine learning and Al offer many potential benefits for organizations aiming to strengthen business operations in the face of a potential recession and other economic disruptions. Many businesses are continuing to invest in data analytics tools, including machine learning and AutoML, but some are withholding investments due to costs/budget support amidst broader spending cuts. Highlighting the benefits of machine learning solutions for businesses, specifically for financial operations, will entice more companies to consider adopting the solutions.

OneStream has an opportunity to assist businesses with new investment demands and priorities.

Key Findings

93% of financial leaders predict inflation to remain elevated into 2023

Financial leaders preparing for an impending recession, with 85% re-forecasting as a result.

Another 11% have already developed a 2023 financial plan with a recession in mind

75% of financial leaders expect ongoing economic & supply chain challenges through late 2023 & beyond

48% of financial leaders welcome technology to streamline financial reporting tasks

Key Findings

Economy

Economic disruptions are seen as the biggest risk to businesses to 2023. Price increases are the number one way that businesses have dealt with inflation (56%), followed by slowed hiring or reduced specific operational costs (47%).

Meanwhile, half of the businesses are reducing corporate spending and updating tax planning and provisions to prepare for updated tax reforms (both 53%).

O

Inflation

Three-quarters of financial leaders both expect inflation to continue until mid-2023 or later and expect COVID- 19-related supply chain disruptions to continue into 2023.

Most businesses have already made alterations to their financial forecasts and strategies in anticipation of an impending recession (85%), and nearly two-thirds of businesses (64%) expect a recession to last until late 2023 or later, similar to projected inflation timelines.

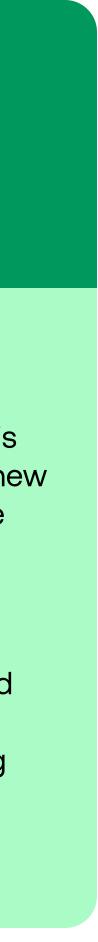

03

Technology

Additionally, although costs/budget support is seen as the biggest obstacle to investing in new technologies, financial leaders also anticipate greater investment in data analysis tools in 2023.

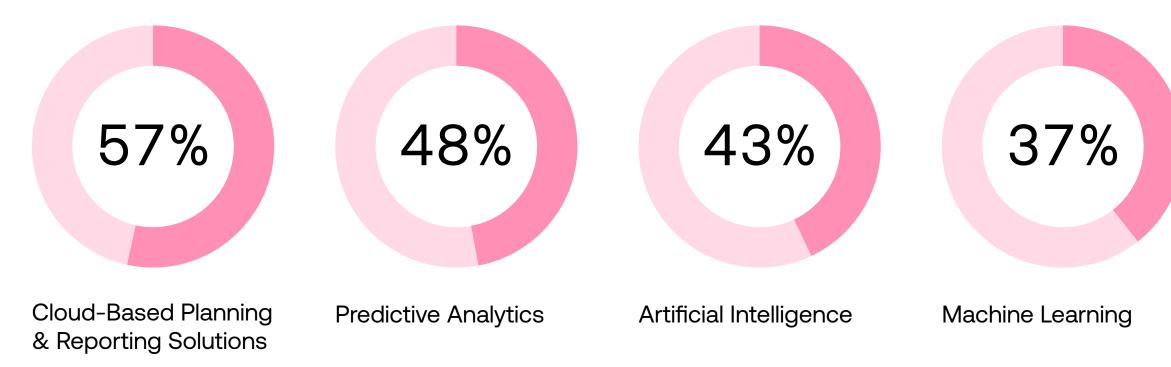

Currently, most (90%) organizations regularly (61%) or intermittently (29%) use cloud-based planning and reporting solutions, while a little under two-thirds (64%) use machine learning (regularly 20%; intermittently 43%).

Stormy/Economic **Conditions** Ahead

Stormy Economic Conditions Ahead

According to the survey, economic disruptions/recession remains the top 2023 concern for nearly half of the organizations, far outdistancing concerns about talent shortages, cybersecurity supply chain disruption and geopolitical disruption.

This was also the top concern earlier this year at 30%; however, in the Fall 2022 survey, this rose to 47% of respondents

Stormy Economic Conditions Ahead

With inflation continuing to plague both individuals and enterprises, price increases are the number one-way organizations have addressed inflation (56%), followed by slowed hiring or reduced specific operational costs (47%).

Nearly half of organizations have slowed hiring or reduced specific operational costs, another significant increase from a year ago

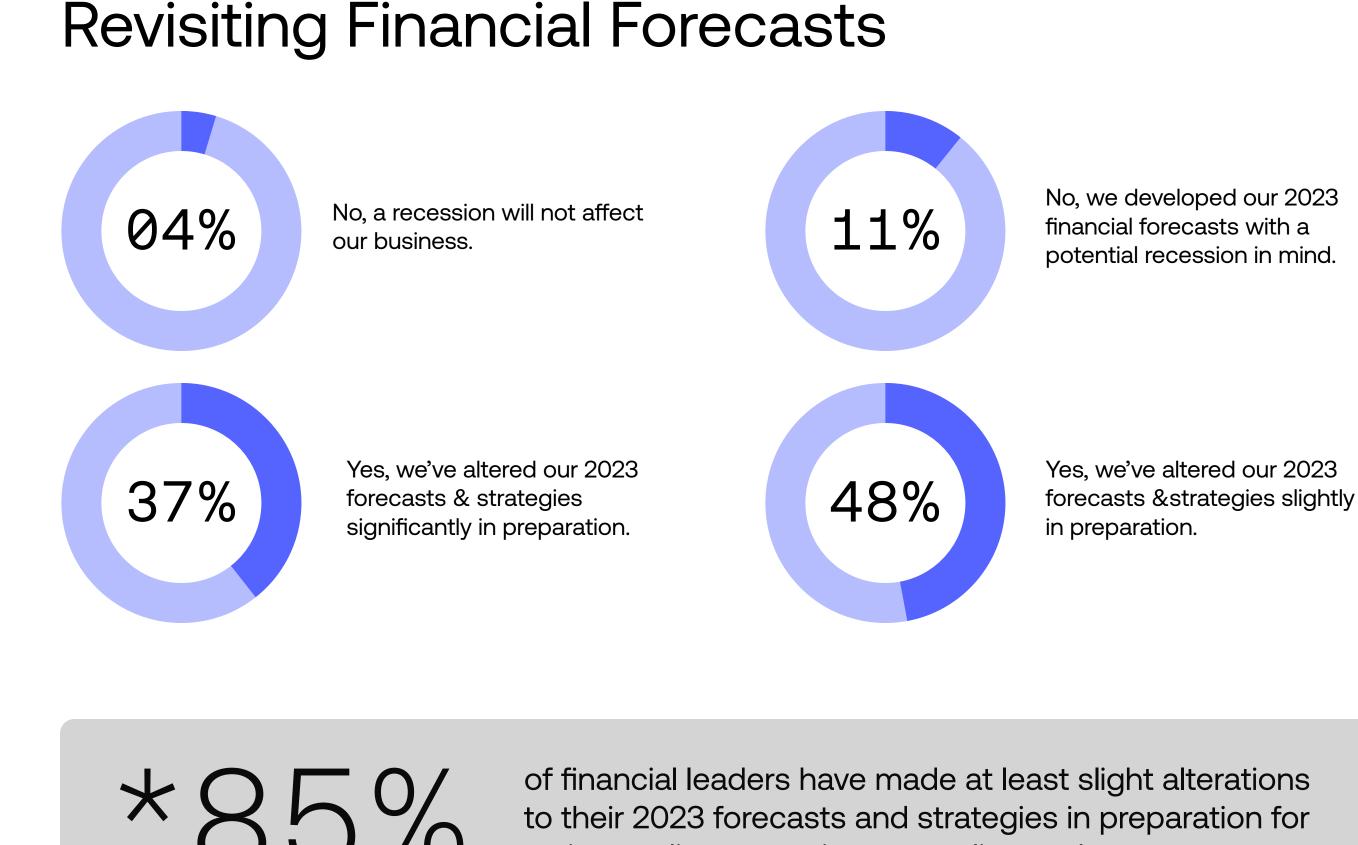

Stormy Economic Conditions Ahead

Regarding the potential for recession, two-thirds of financial leaders expect a recession to occur and last until late 2023 or later. Three-quarters of financial leaders also expect the pandemic-related supply chain issues to continue into 2023, but very few (8%) expect the issues to extend beyond 2023.

an impending recession, according to the survey.

Investment in Cloud Planning & Analysis Tools Increasing

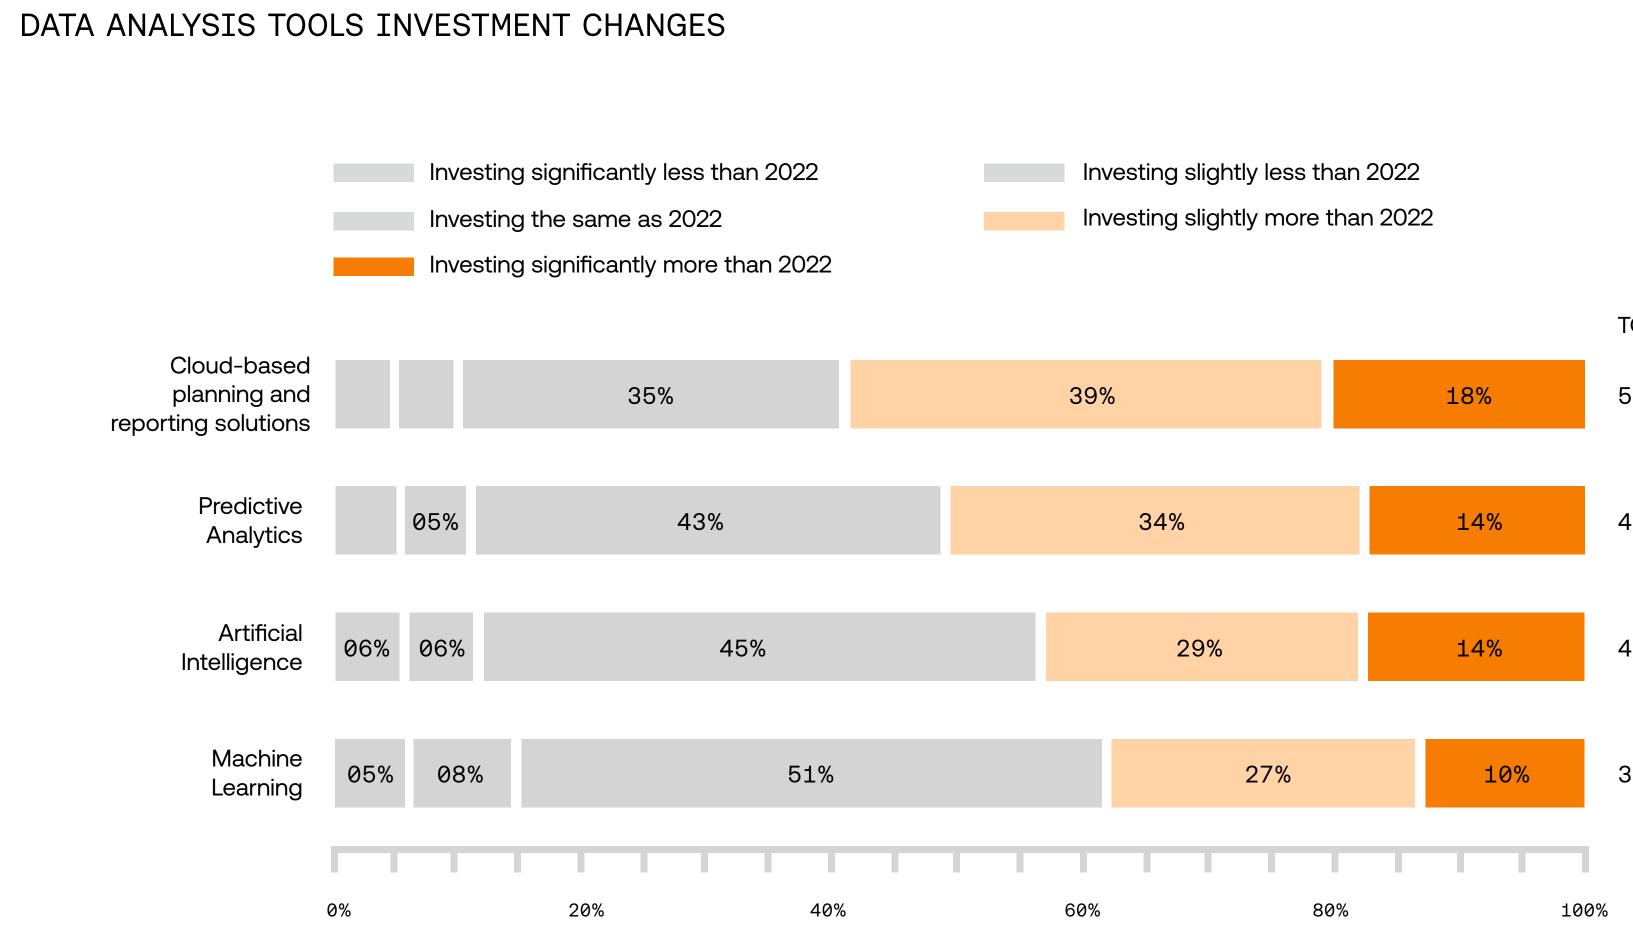

Investment in Cloud Planning & Analysis Tools Increasing

Over two-thirds of businesses regularly use cloud-based planning and reporting, and one in five (20%) report regularly using machine learning within their departments.

Looking forward, over half of financial leaders predict investing more in cloud-based solutions.

Meanwhile, only one-third of companies (37%) predict investing more in machine learning, which is significantly fewer companies than predicted both last fall and earlier this year.

Investment in Cloud Planning & Analysis Tools Increasing

When asked about roadblocks to technology investment this year, financial decision-makers cited costs/budget support as the top obstacle (51%) for investing in new technologies

Final Thoughts

The results of the Financial Decision-Makers Survey highlighted the ongoing business challenges CFOs and Finance leaders face as they plan for what's ahead in 2023.

Inflation, higher interest rates, supply chain bottlenecks, and recession are here to stay and most Finance executives expect them to continue into 2023.

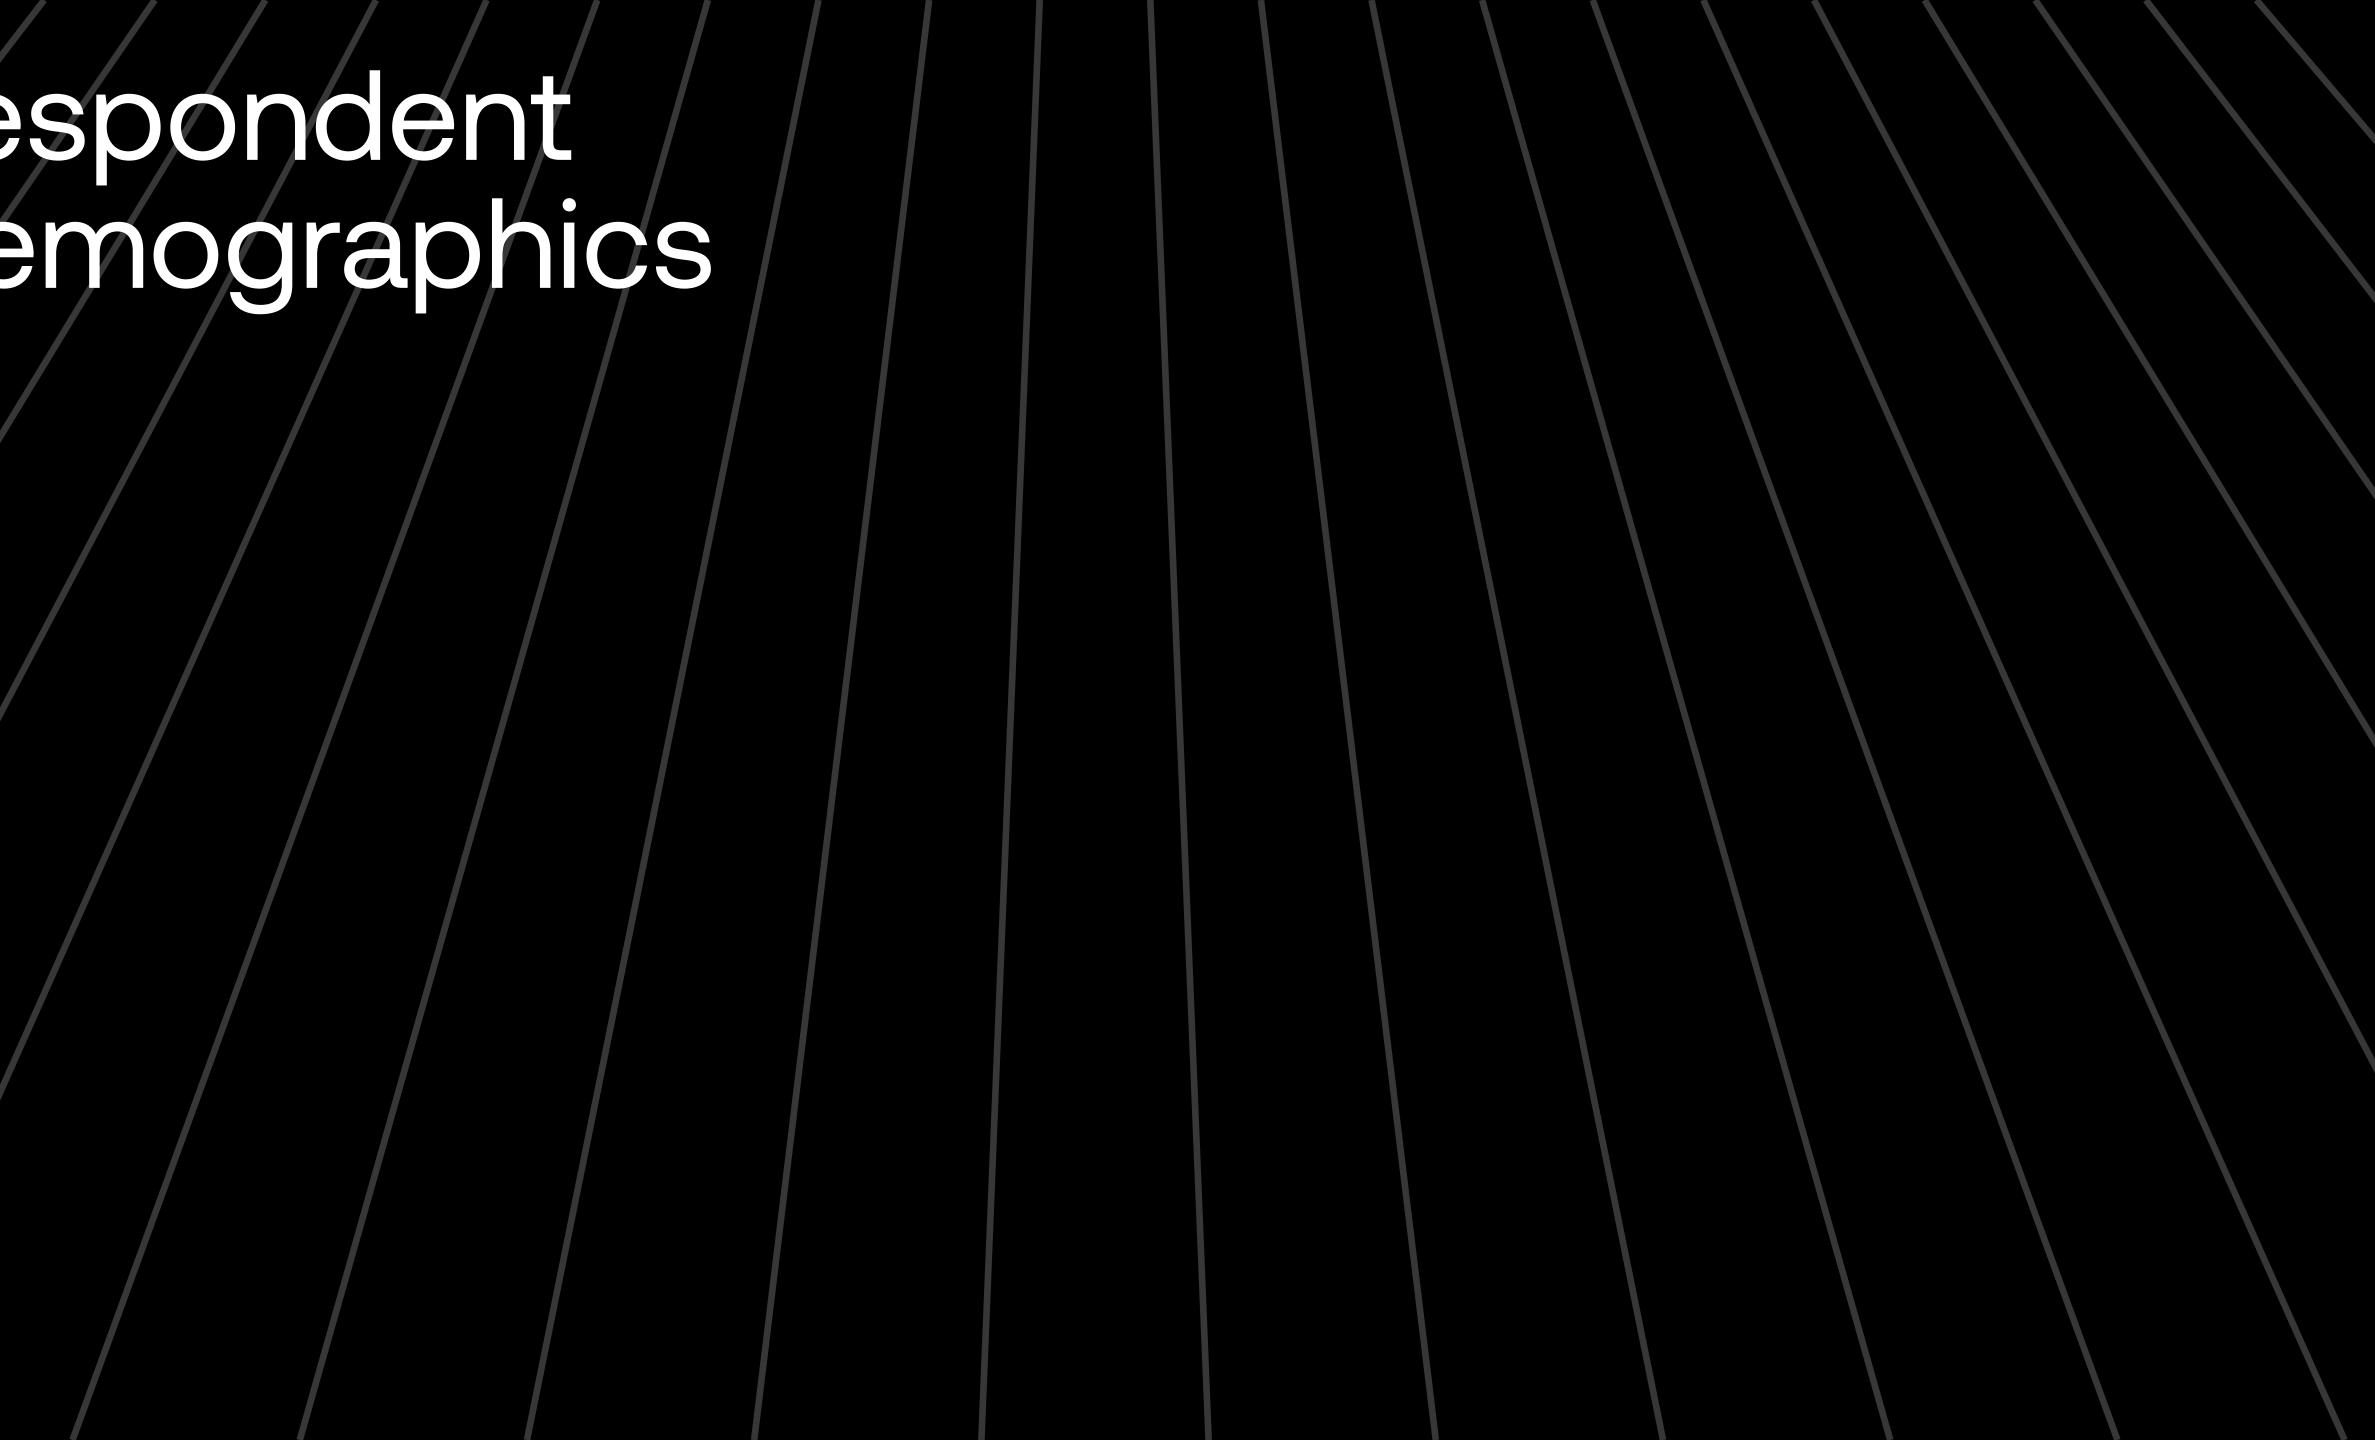

The good news is that today's cloud-based analytical software technologies are seeing increased adoption and proving their worth in helping Finance teams become more efficient, plan and navigate a volatile economic landscape, and increase their agility to respond.

Artificial intelligence and machine learning adoption still lags mainstream planning and predictive analytics tools. But as these capabilities are embedded into modern planning, reporting and analytical software applications, Finance adoption is poised to expand rapidly.
