

Bridging the Corporate Performance Management Gap

Organizations rely heavily on analytics to understand key trends, make better informed decisions, and take action that improves business performance.

However, 86% of analytic effort misses the mark.

This is due to a Corporate Performance Management Gap:

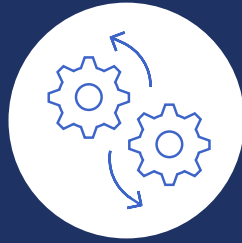

1

A lack of alignment between finance, business operations and the wider enterprise ecosystem.

2

Too many resources are tied up with fragmented legacy systems and spreadsheets.

3

Unable to do their job effectively and meet priority demands due to a lack of unified tools and resources.

4

Absence of agility when analyzing data and inability to quickly align financial and operational data.

What People are Saying...

Only **50%**

Only **50%** of finance leaders feel prepared to meet strategic objectives.

CFO

66% of organizations say they cannot analyze their data fast enough.

IT

52% of organizations say they do not have a strategy for managing their data.

Only **36%** of organizations are able to regularly add new sources of data to enrich business understanding.

Only **36%**

77%

77% of FP&A want to be more proactive and aligned with business partners across the ecosystem.

FP&A

Only **38%** of organizations are able to make widespread use of non-financial data.

Only **53%**

ACCOUNTING

67% say too many resources are tied up with legacy systems and traditional ways of working.

Only **53%** of organizations say they have ready access to at least 5 years of comparative financial data.
